1. ~~12~~ ¹³ (Sixth Amendment) A massage and tactile stimulation device comprising a glove made of a resilient material having a front wall and a back wall connected by a means for joining two pieces of material to form fingers, a palm area and a backhand area, said glove having a first effective working area on the front wall of said fingers having stationary upward hemispherical projections, a second effective working area located on the back wall of said fingers having stationary elongated projections with flat upward surface, and a third effective working area located on said palm area having friction areas secured to said glove elliptical in shape covering the palm pad of the thumb and circular in shape covering the pisiform bone located at base of the fifth digit pad, said glove having one or more upward projections of at least 0.14 inches (3.5mm) in height secured at both said first and second effective working areas of the glove, said upward projections and said friction areas being attached to said glove by a stationary bonding means wherein no part of the one or more upward projections and the one or more friction areas move with respect to said glove walls.

JS 2. ~~13~~ ¹⁴ The glove of claim ~~1~~ ¹³ wherein said resilient material is lycra.

JS 3. ~~14~~ ¹⁵ The glove of claim ~~1~~ ¹⁴ wherein said means for joining two pieces of material is sewing.

JS 4. ~~15~~ ¹⁶ The glove of claim ~~1~~ ¹⁵ wherein said first and second effective working areas each having said upward projections and third effective working area having said friction areas secured thereto, are exclusively located at pad of digits, phalanges region and a palm, respectively.

6. ¹²¹~~46~~ The glove of claim ¹²¹1 wherein said stationary bonding for said upward projections and said friction area is pressure sensitive adhesion.

8. Cancelled. ⁴~~45~~

per ⁵~~47~~ 11. The glove of claim ⁵3 wherein said upward projections are single, individual protrusions located on each said pad of digits and said phalanges region, whereby deep pressure is imparted by said device and whereby said projections optimize the benefits of massage and tactile stimulation.

Signed,

Deanna T. Cheng, P.T. 8/5/03
